TROPICAL AGRICULTURE MAGAZINE

Tropical Agriculture has made a significant contribution to tropical agriculture through the publication of research results on the many constraints to tropical agriculture development. Many of these findings have been implemented in the tropics and the journal continues to be a source of information to researchers in tropical, subtropical, and temperate regions. In the early years of the journal, most of the articles were in the areas of crop and soil science, but today the coverage has increased substantially to include other technological areas, for example, livestock production and mechanization and topics in the social sciences, for example, economics of agricultural production and agricultural extension methodologies
